

Jonas Data Import/Export API

Jonas Provides the ability to import and export data to external third party applications via a web Service.

Any third party software such as Salesforce or QuickBooks can now exchange data associated with the following objects defined in Jonas:

- Customers
- Work Orders
- Jobs

Jonas interacts with external applications based on the SOAP protocol using a web Service on a pre-defined schema as illustrated in a later section of this document.

Web Service URL:

- <https://websvc.jonasportal.com/jonasAPI/japi.asmx>

Web Methods:

1. Login

```
<securityToken>string</securityToken>
```

```
<username>string</username>
```

```
<password>string</password>
```

Returns: serialized JSON object

Format: { isAuthenticated: true/false, isValid: true/false, data: string, message: string }

2. JonasAPI

```
<securityToken>string</securityToken>
```

```
<username>string</username>
```

```
<password>string</password>
```

```
<apiParams>string</apiParams>
```

Returns: serialized JSON object

Format: { isAuthenticated: true/false, isValid: true/false, data: string, message: string }

Web Method JonasAPI Parameters Explained:

<securityToken>	- security hash key provided by Jonas.
<username>	- valid customer's Jonas system user name.
<password>	- valid customer's Jonas system password.
<apiParams>	- valid JSON string compliant with Jonas API schema.

Jonas API Object Schemas:

• Default Schema	-	 Jonas API Default Schema
• Work Order Schema	-	 Jonas API Work Order Schema
• Customer Schema	-	 Jonas API Customer Schema
• Job Master Schema	-	 Jonas API Job Master Schema

Objects:

- **GJZJ6J** – Create a new Customer / Update an existing Customer / Export Customer Data
- **GJZJ18J** – Create a new Work Order / Export Work Order Data
- **GJZJ28J** – Create a new Job / Export Job Data
- **GJZJ82J** – Jonas template data Export / Import

Options:

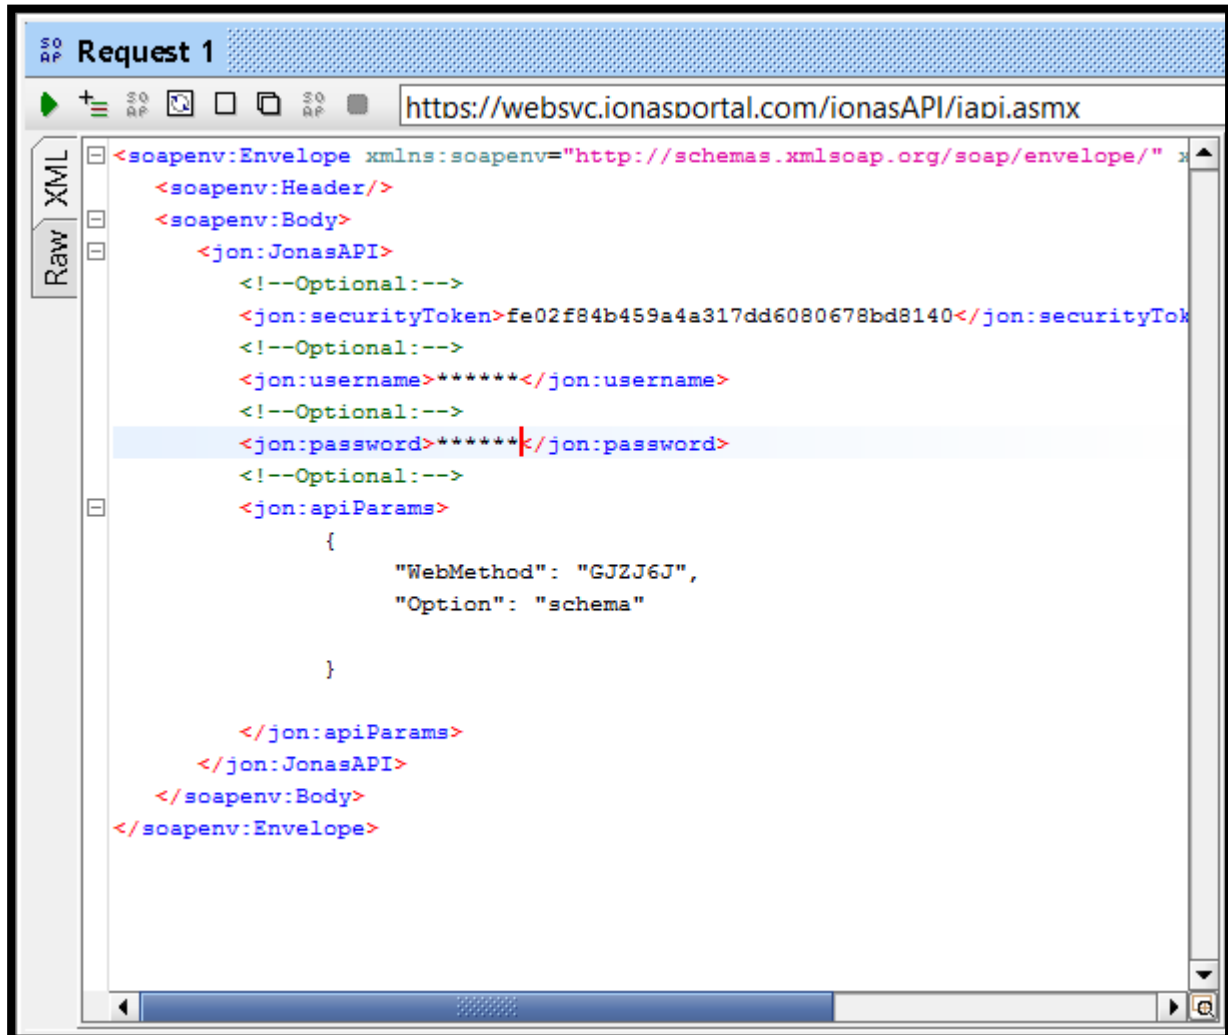

Each call object has the following Options and each option returns a different result set as explained below.

- **Schema** - Get the schema for the web Method.
- **Template** - Returns the JSON template containing the data fields with no data.
- **Download** - Returns the JSON template containing the data fields as well.
- **Scan** - Error scan only, does not upload Data
- **Update** - Submits records to be scanned for errors and uploaded into the system

Sample API Parameters SOAP Request and Response:

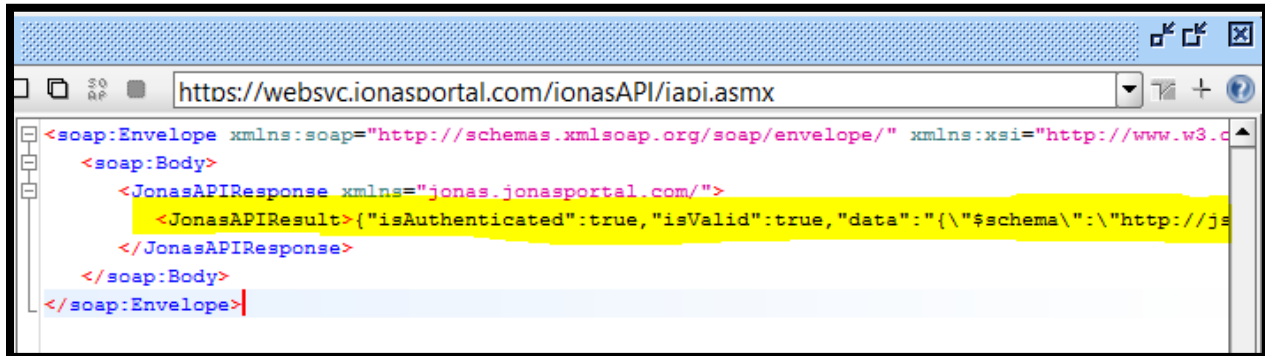

1. Method Call – “GJZJ6J”

a) Option – “Schema ”
